PREFACE

In presenting this book to Druggists, Physicians and an intelligent public in general, it is my ardent desire that it will be the means of overcoming a long felt necessity. It is the result of the research of many years, inasmuch as it was my anxious intention to make my work as full and comprehensive as possible. I have collected the scientific names of all the crude drugs now in general use, in the various languages named in the title page, and have also given the most popular local names of the drugs. The whole is arranged in alphabetical order, which will not only save time, but will facilitate the search for what is wanted on any occasion. The names of those drugs which have become obsolete have been entirely omitted. Hoping that the work may fill a vacuum long sought to be overcome, I herewith submit it to a discerning public.

JOHN RUDOLPHY.

Since the foregoing lines have been written and printed, many years have passed, and have shown the great success this work has found.

On account of the great demand for this work I have undertaken to publish this new edition, and I sincerely hope the same will be welcomed by all knowing the great value of this work.

New York, December, 1909.
